To Pittwater High School
C/- Mr Bill Holland

Dear Mr Holland,

The project to have Pittwater High School become a solar power station, I believe a first for this nation, is a genuinely exciting and practical project. We hope it is the first of many such projects.

From our perspective, this project will deliver a number of desirable outcomes for both the school and the wider community, such as:

- Providing a working and accessible example of renewable energy in action for our community.
- Providing an opportunity for hands on education for Pittwater High students as well as other local Primary and Secondary schools.
- Set an example of community leadership to other schools and community groups.
- Providing a tangible example of renewable energy in action for our local, state and federal governments.
- Providing a source of hope & inspiration in the community as we grapple to adjust to the realities of climate change.
- Last but not least, the project will provide a source of renewable clean energy, not only for the school but the entire community for many decades to come.

The Northern Beaches Greens are happily committing 3 solar panels to this project from money we've raised specifically to support this project, which has generated a lot of excitement in the local community.

I firmly hope that this project becomes a beacon for other schools and community groups, enabling and inspiring them to complete similar projects themselves.

Craige McWhirter
Greens Candidate for Mackellar
